FULLSTACK DEVELOPER

RESPONSIBILITES:

- Frontend Development: Utilize the in-house design system and component library, along with Next.js and front-end frameworks such as Ant Design, MUI, and TypeScript/JavaScript, to implement captivating and responsive user interfaces based on designer mock-ups and wireframes for diverse applications.
- Contribution to Design System and Component Library: Contribute to building and iterating on our in-house design system and component library, ensuring consistency and scalability across all software applications.
- Analysis and Design: Actively participate in dissecting project requirements and contribute to designing robust software architectures for various applications, including those tailored for perfumer tools and machine operations.
- Mobile Responsive Design: Craft features and applications with a keen focus on mobile responsiveness and seamless user experience across all applications.
- Architecture Design: Design both client-side and server-side architecture, leveraging React, Next.js, and NodeJS to ensure the scalability and efficiency of our applications, catering specifically to the unique needs of perfumers and machine operators.
- API Integration: Implement APIs with a strong emphasis on seamless integration, ensuring a cohesive link between software components for applications.
- Testing and Debugging: Proficiency in testing methodologies, mocking, and debugging tools to maintain application integrity across various tools and applications.
- Performance Optimization: Fine-tune source code for optimal application performance without compromising functionality.

REQUIREMENTS:

- 8+ years of Fullstack Software Engineering experience, demonstrating proficiency in both frontend and backend development.
- React, Next.js, and NodeJS: Strong familiarity with these frameworks for both client-side and server-side architecture, tailored to the specific needs of different applications.
- Design Implementation: Experience translating designer mock-ups and wireframes into captivating front-end code across a variety of applications.
- Design System Contribution: Experience in contributing to the development and iteration of an in-house design system and component library, fostering consistency and scalability, specifically leveraging Next.js.
- Mobile-First Approach: Proficiency in crafting mobile-responsive designs and user interfaces catering to different user groups, including perfumers and machine operators.
- API Development: Experience implementing APIs, ensuring seamless integration between components across diverse applications.
- Database Knowledge: Basic understanding of databases, including MySQL and/or NoSQL (DynamoDB), tailored to different application requirements.
- Language Skills: good use of English

BENEFITS:

- Attractive salary.
- Opportunity to work with the latest technologies and software.
- Friendly and professional working environment with colleagues from all around the world.
- 28 days holiday per year.
- Fully paid probation.
